Richard A. Frank, Administrator
Environmental Data and Information Service
Thomas D. Potter, Acting Director

This is the sixth in the series of the publication titled World Weather Records. The earlier issues, which included climatological information through 1960, have had global distribution and have been widely used for meteorological and climatological research. This volume provides data for Europe for the 1961-70 period.

At its Sixth Session in Bad Homburg, Federal Republic of Germany, in October 1973, the Commission for Special Applications of Meteorology and Climatology (CoSAMC) of the World Meteorological Organization, in Resolution 7, accepted the offer of the United States to digitize and publish the "World Weather Records, 1961-70." The United States agreed to collect and edit the 1961-70 data for Region IV (North America). It was suggested that Regional Associations I, II, III, V, and VI arrange in the most suitable way within each Region for the collection and preparation for publication of the data in the "World Weather Records, 1961-70."

The United States extends its gratitude to the meteorological services and other organizations who graciously supplied data and particularly to the Federal Republic of Germany for service as data collector for Region VI. The present volume for Europe contains data for all countries that were included in previous issues of World Weather Records with the exception of Lebanon. Unfortunately, data from this country were not available at the publication date.

EDITORIAL NOTES

This issue of the World Weather Records is primarily concerned with data for 1961-70. As in previous issues, data for earlier years have been included when appropriate and available. The first issue included data from earliest records available at that time up to 1920. Data for the periods 1921-1930, 1931-1940, 1941-1950, and 1951-1960 were published in succeeding issues. The present volumes continue, insofar as possible, the record of monthly mean values of station pressure, sea level pressure, temperature, and monthly total precipitation for stations listed in previous volumes.

Information concerning the exposure of instruments, hours of observations, and methods of adjusting or correcting observational data has been included in station notes whenever it was supplied.

Lake levels, freeze and thaw dates, and sunspot numbers are included. No attempt has been made at a world-wide coverage of these statistics beyond a general request to countries to send these data whenever available.

SOURCES OF DATA

Unless otherwise stated in the notes, data were supplied to the Regional collector by national meteorological services whose addresses may be found in publications of the World Meteorological Organization. The data have been published as received by the United States from the Regional collector. CLINO data are long term means taken from the World Meteorological Organization publication, Climatological Normals (CLINO) WMO/OMM - No. 117 T.P. 52 or are values supplied by the respective authorities.

GROUPINGS OF STATIONS AND ARRANGEMENT OF DATA

The six volumes of this issue of the World Weather Records have been so arranged as to provide a natural geographic separation into what are essentially units of a single continent. Two of the volumes, however, contain island and Ocean Weather Station data as well as those of the smaller continents. Insofar as possible the National Climatic Center has also drawn upon the World Meteorological Organization structure for guidance. For example, Israel and Jordan, which are Members of the World Meteorological Organization Region VI - Europe, appear in the volume for Europe.

Within each volume the data are presented alphabetically by station within geographic areas which usually, but not necessarily, coincide with political entities.

Three means of locating desired information have been included. The Table of Contents at the beginning of this volume lists, for the data included, the major geographic divisions or countries, giving page numbers for notes and data as well as pages where lake levels, freeze and thaw dates, and sunspot numbers may be found. The two indexes at the rear of this volume provide information in greater detail. The first is a master list of all locations, station or area included in the particular volume, listed alphabetically without regard to geographical division or country. In the second index, station names are listed in alphabetical order for each major geographical area or country.

The data listing for each station is headed with the name, latitude, longitude, and barometer height above mean sea level at the close of the period for which data are published, unless noted otherwise in the station notes, and the geographic subdivision or country within which it is located together with the WMO number wherever one has been assigned. Also included are the page numbers where the station notes may be found.

Lake and river levels, sunspot numbers, and dates of freezing or thawing of rivers or lakes are grouped in separate sections following meteorological data.

ADJUSTMENTS FOR HOMOGENEITY

Previous issues of the World Weather Records have provided for homogeneity of records by adjusting the most recent period of record to the earlier period. In this volume data have been published as received. No attempt has been made to correct for relocation of stations or changes in instrumentation or procedures. Each meteorological service was requested to provide, with the data, information concerning exposure, changes in location, instruments and observations or any other factors which might affect the homogeneity of the record. These have been included in the Station Notes whenever supplied.

CONVERSION OF UNITS

All data are presented in metric units as received.

The totals of precipitation are understood to include all forms of precipitation: rain, snow, sleet, hail, etc. The water equivalents of solid precipitation are given after melting, weighing, or estimating. The letter "T" denotes an amount of precipitation more than zero but less than one-half millimeter.

METHODS OF AVERAGING

Monthly period means are the sums of the monthly means divided by the number of years for which data are available. Annual means of pressure and temperature are one-twelfth (1/12) of the sum of the monthly or period means. Annual precipitation totals are the sums of the twelve monthly totals or monthly period means.

UNITS IN STATION NOTES

The units of height and distance used in the station notes are those furnished by the respective countries and are metric.

ABBREVIATIONS AND SYMBOLS

H_p : Height (above mean sea level) to which station pressure shown in this volume has been reduced. If different heights have been used for different periods, the information is carried in Station Notes.

H_z : Height of the barometer above mean sea level for the period shown.

H : Height of the ground at the station above mean sea level.

h_t : Height of the thermometer above ground.

h_r : Height of the rim of the precipitation gauge above ground.

Lat : Latitude of the station.

Long : Longitude of the station.

E : Data have been estimated by the method described in the Station Notes for that station, or are based on incomplete data, or are uncertain for some other reason.

ALBANIA

STATION NOTES

ALBANIA (3 stations)

General: Monthly values are derived as follows:

Mean sea level pressure	= 1/3 (07h + 14h + 21h)
Mean station pressure	= 1/4 (07h + 14h + 21h + 21h)
Mean temperature	= 1/4 (07h + 14h + 21h + 21h)
Precipitation	= total for the month

All readings are in local time and for all stations h_t = 2 meters; h_r = 1.5 meters. Station pressure values have been corrected to 0° Celsius and to gravity at 45° latitude.

AUSTRIA

STATION NOTES

AUSTRIA (7 stations)

General: Station names, elevations, elevations of the barometer cup and coordinates given in the table headings and in the station notes are those in use at the end of 1970. Station pressure data, the barometer correction being introduced, have been corrected to 0° Celsius and to gravity at 45°N latitude. Monthly values are taken from the monthly values at observation time calculated according to the following formulas:

pressure	m = 1/3 (07h + 14h + 21h)
temperature	m = 1/4 (07h + 14h + 21h + 21h)
precipitation	total for the month

All readings are in local time. Precipitation is measured daily at 07h and 21h. The daily total includes the measurements at 21h and 07h of the following day. Thus, the daily total represents the 24 hours beginning after the measurement at 07h. The area of the circular aperture of the gauge is either 200 cm^2 or 500 cm^2.

Reduction of the station pressure to sea level was carried out by use of the formula:

$$P_o = P_z \, e^{-\frac{gz}{RT}}$$

g = the force of gravity
R = 2.8704×10^6 erg g^{-1} $°K^{-1}$
T = virtual temperature, calculated from the monthly relative humidity and temperature mean values of the individual station
z = present barometer height

The reduction of the air pressure data to the present barometer height has been made according to the "US Standard Atmosphere 1962."

The stations of Klagenfurt-Annabichl, Salzburg-Maxglan and Graz-Thalerhof are at airport locations. The official altitude of the aerodrome is given here instead of the actual station elevation.

CLINO data are taken from the World Meteorological Organization publication, Climatological Normals (CLINO) WMO/OMM - No.117 T.P. 52, period 1931-1960.

STATION NOTES

GRAZ - THALERHOF (airport)

47°00'N 15°26'E

Gravity correction: +0.09 Torr
Barometer levels:

Date	Level (m)
JAN/61 - MAR/06/69	342.0
MAR/07/69 - DEC/70	347.0

All air pressure values from 1961 through 1970 have been reduced to present barometer height.

H = 340 m H_z = 347.0 m H_t = 2.1 m H_r = 1.0 m

INNSBRUCK - UNIVERSITY

47°16'N 11°24'E

Gravity correction: +0.07 Torr
Barometer level: 579.3 m (JAN/61 - DEC/70)

H = 577 m H_z = 579.3 m H_t = 2.0 m H_r 1.0 m

KLAGENFURT - ANNABICHL (airport)

46°39'N 14°20'E

Gravity correction: +0.04 Torr
Barometer levels:

Date	Level (m)
JAN/61 - SEP/13/62	448.2
SEP/14/62 - DEC/70	451.5

All air pressure values from 1961 through 1970 have been reduced to present barometer height.

H - 448 m H_z = 451.5 m H_t = 2.0 m H_r 1.1 m

STATION NOTES

ST. POELTEN

48°12'N 15°37'E

Gravity correction: +0.17 Torr
Barometer level: 282.3 m (JAN 1961 - DEC 1970)
A-3100 ST. POELTEN, Wallseerstrasse 11

H = 277 m H_z = 282.3 m H_t = 2.0 m H_r = 1.0 m

SALZBURG - MAXGLAN (airport)

47°48'N 13°00'E

Gravity correction: +0.12 Torr
Barometer levels:

Date	Level (m)
JAN 1961 - MAY 7, 1964	435.2
MAY 8, 1964 - OCT 21, 1969	445.7
OCT 22, 1969 - DEC 1970	450.3

All air pressure values from 1961 through 1970 have been reduced to present barometer height.

H = 430 m H_z = 450.3 m H_t = 2.0 m H_r = 1.2 m

SONNBLICK
47°03'N 12°57'E

Gravity correction: -0.21 Torr
Barometer level: 3106.5 m (JAN 1961 - DEC 1970)

Precipitation amounts were calculated as mean values of the amounts from two rain gauges (N + S rain gauge)/2, in order to minimize uncertainties inherent to precipitation measurements in the high mountains. The North rain gauge is located on the northwest side of the Summit House; the South rain gauge is on the south side.

H = 3105 m H_z = 3106.5 m H_t = 6.7 m H_r = 1.4 m

WIEN - HOHE WARTE

48°15'N 16°22'E

Gravity correction: +0.19 Torr
Barometer level: 202.5 m (JAN/61 - DEC/70)

H = 199 m H_z = 202.5 m H_t = 1.85 m H_r = 1.0 m

GRAZ-THALERHOF AUSTRIA WMO 11240 47 00N 15 26E 347 M

BELGIUM

BELGIUM (1 station)

UCCLE

The station location has been the same throughout the period.

Temperature: Monthly mean temperature values are the means of the bi-hourly values (02h, 04h - - - - 24h). Temperatures are measured by an aspiration psychrometer three times a day between 0800 and 1800 hours and are read from a register from 2000 hours through 0600 hours.

Pressure: Monthly means of pressure values are the means of the bi-hourly values (02h, 04h - - - - 24h). When the readings are not taken directly from the mercury barometer observations, corrected microbarograph recordings are used.

Precipitation: Monthly values are the totals of daily readings at the 0800 hours observation.

Time: The time standard in use is Universal Time (U.T.).

UCCLE BELGIUM WMO 06447 50 48N 04 21E 100 M

CYPRUS

STATION NOTES

CYPRUS (1 station)

Pressure: Station level pressure values are not included. Mean sea level pressures are computed from the formula:

$$P = 1/4\ (00h + 06h + 12h + 18h)\ \text{GMT}.$$

Temperature: Mean monthly values are computed from the formula:

$$T = 1/2\ (\text{Daily maximum} + \text{daily minimum})$$, the maxima and minima being read at 0600 GMT; the maximum is credited to the previous day.

Precipitation: The monthly total is the sum of the daily readings taken at 0600 GMT and credited to the previous day.

NICOSIA CYPRUS WMO 17606 35 09N 33 17E 220 M

CZECHOSLOVAKIA

CZECHOSLOVAKIA (8 stations)

General: The station elevations are taken to be the height of the barometer cistern above sea level.

Daily temperature means are calculated according to the following formula:

$$m = 1/4 (07h + 14h + 2 \times 21h)$$

Daily means of atmospheric pressure and relative humditiy are determined by means of the formula:

$$m = 1/3 (07h + 14h + 21h)$$

In all cases h represents local mean solar time.

Atmospheric pressure reduction to sea level is determined by methods described in the "Meteorologisches Taschenbuch IV," 1939, by F. Linke. For the sake of homogeneity of the reduced data, g = 9.80 and R, the gas constant, = 2.87.

Precipitation measurements were taken with rain gauges of 500 cm^2 aperture, installed 1 m above ground. The instruments were not protected against wind effects.

BRATISLAVA IVANKA CZECHOSLOVAKIA WMO 11816 48 10N 17 12E 138 M

DENMARK

DENMARK (1 station)

The elevation given in the table headings, 5 m. is the height of the barometer at the Kastrup Airport. Elevation of the Landbohøjskole is 9 m.

Pressure: Data are from readings taken at the Kastrup Airport 55°38'N, 12°40'E, H_z = 5 m. Mean pressures are calculated as the mean of 8 daily observations at 00, 03, 06, 09, 12, 15, 18, and 21 GMT.

Temperature: 3 daily observations at 07, 13 and 20 GMT. Calculation of mean temperatures, see Appedice p. 4 jf: Meteorologisk Årobg, 1ste del: Danmark, 1958 or later.

FINLAND

FINLAND (15 stations)

General: Station names, elevations and coordinates are those applicable at the end of 1970.

Temperature: The monthly average temperature is calculated from four observations (00, 06, 12, 18 GMT) by using the formula:

$$m = 1/4\ (t_{00} + t_{06} + t_{12} + t_{18}) + k,$$

in which the correction value k for the different months is as follows:

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XI
-0.04	0.01	0.17	0.00	-0.12	-0.07	-0.15	-0.11	0.08	0.05	-0.03	-0.03

The location of every station has remained the same during the period 1961-1970.

HELSINKI/SEUTULA FINLAND WMO 02974 60 19N 24 58E 56 M

FRANCE

STATION NOTES

FRANCE (21 stations)

Comments related to the preparation of data and to changes in French stations regarding the publication of the 1961-1970 volume of World Weather Records.

1. The reduction of pressure to sea level is carried out by using the following relationship:

$$\log \frac{P_o}{P_s} = \frac{0.014827.\bar{z}_s}{273.15 + t_{v_s} + 0.00325.\bar{z}_s}$$

where P_o = the equivalent sea level pressure

P_s = station pressure

$\bar{z}_s$ = height of the barometer at the station (in meters)

t_{v_s} = virtual temperature at station (°C)

$$t_{v_s} = \frac{t_s + 273.15}{1 - \frac{0.37802e_s}{P_s}} - 273.15$$

t_s = station temperature

2. The means of pressure (station and reduced to MSL) and temperature are computed from 3-hourly observations at 00, 03, .. 21 GMT.

3. The precipitation totals are compiled from 24-hour (daily) totals recorded each day at 06 GMT.

4. The Paris station Parc-St-Maur, closed, has been replaced by Paris-Montsouris, with the following coordinates: latitude 48°49'N, longitude 002°20'E; altitude 75 meters; altitude of barometer 77 m. Station indicator 07156.

5. The station Nancy has been moved from Tomblaine ā Essey on May 9, 1960. Its new coordinates are latitude 48°41'N, longitude 006°13'E; altitude 212 m; barometer height 217 m; no change in station number.

6. The station of Cherbourg-Chantereyne, closed, has been replaced by Cherbourg Maupertus Horteng in 1-1-67.

   The new coordinates latitude 49°39'N, longitude 001°28'W; height 138 m; barometer height 138. Station number 07024. No data was furnished by the station from 1961-1966 inclusive.

7. The 21 stations reporting data are: Ajaccio, Bordeaux, Bourges, Brest, Cherbourg, Dijon, Limoges, Lyon, Marseille, Nancy, Nantes, Nice, Nimes-Courbessac, Paris-le-Bourget, Paris-Montsouris, Perpignan, Salon, Strasbourg, Toulon, Toulouse-Blagnac, Trappes.

GERMANY, FEDERAL REPUBLIC

GERMANY, FEDERAL REPUBLIC OF (18 stations)

General: Station names, elevations, and co-ordinates refer to the end of 1970. Elevation of station as well as height of barometer are given in meters and/or tenths of meter above mean sea level.

Observations on a regular basis are made at 07.00, 14.00, 21.00 local time by the following stations:

Berlin/Oahlem
Berlin/Tempelhof
Emden
Essen
Frankfurt a.M./Flughafen
Friedrichshafen
Geisenheim
Hamburg/Fuhlsbuettel
Hannover/Langenhagen
Hohenpeissenberg
Kassel
Muenchen/Riem
Nuernberg/Krafthof
Saarbruecken/Ensheim
Schleswig
Stuttgart/Echterdingen
Trier/Petrisberg
Zugspitze

The atmospheric pressure has been reduced to 0°C and standard gravity at 45° latitude. The barometric mean values are calculated by arithmetically averaging the means of the pressure obtained from the regular times of observation.

Mean monthly temperature values are obtained at stations with three times of daily observation as follows:

$$m = 1/4 (07h + 14h + 2 \times 21h)$$

Precipitation is measured daily at 07.00 hours and recorded for the day of the measurement.

Stations:

BERLIN/DAHLEM

The station is located at the Meteorological Institute of the Freie Universitat Berlin. The former station at the Biologische Lehr- und Forschungsanstalt was closed in 1963.

BERLIN/TEMPELHOF

Date	Lat.	Long.	H	H_z
1/01/61 - 9/09/70	52°28'N	13°24'E	51	54.9
9/10/70 - 12/31/70	52°28'N	13°24'E	48	49.0

A minor local transfer took place.

EMDEN

The station Emden/Wolthusen was chosen because of consecutive observational records.

ESSEN

Date	Lat.	Long.	H	H_z
1/01/61 - 7/11/65	51°25'N	06°57'E	120	129.3
7/12/65 - 12/31/70	51°24'N	06°58'E	154	161.1

FRANKFURT A.M./FLUGHAFEN

During the entire period in question observations have been made on a regular basis at the Frankfurt a.M./Flughafen station replacing the station Frankfurt a.M./Stadt the climatological records of which have become inhomogeneous due to several interruptions and transfers.

HAMBURG/FUHLSBUETTEL

Date	Lat.	Long.	H	H_z
1/01/61 - 7/11/68	53°38'N	10°00'E	14	15.4
7/12/68 - 12/31/70	53°38'N	09°59'E	13	16.4

A minor local transfer took place.

HANNOVER/LANGENHAGEN

Date	Lat.	Long.	H	H_z
1/01/61 - 11/04/64	52°28'N	09°42'E	52	52.4
11/05/64 - 10/04/67	52°27'N	09°43'E	53	54.2
10/05/67 - 12/31/70	52°28'N	09°42'E	53	54.1

A minor local transfer took place.

HOHENPEISSENBERG

Date	Lat.	Long.	H	H_z
1/01/60 - 12/10/67	47°48'N	11°01'E	977	982.5
12/11/67 - 12/31/70	47°48'N	11°01'E	977	985.5

The temperature records are published by this station.

MUENCHEN/RIEM

Date	Lat.	Long.	H	H_z
1/01/60 - 4/16/69	48°08'N	11°42'E	524	526.5
4/17/69 - 12/31/70	48°09'N	11°43'E	527	528.9

The standard temperature values of the new station (observer's house at the runway) are in the average around 0.3°C lower than those of the old station.

SAARBRUECKEN/ENSHEIM

Saarbruecken/Ensheim (Airport) does not continue the former records of Saarbruecken/Stadt. Saarbruecken/Ensheim (Airport) was chosen since complete observational records of the air pressure are available.

STUTTGART/ECHTERDINGEN

Date	Lat.	Long.	H	H_z
1/01/60 - 12/31/65	48°41'N	09°12'E	405	400.5
1/01/66 - 12/31/70	48°41'N	09°12'E	398	418.7

A minor transfer took place within the area of the airport.

TRIER/PETRISBERG

The values come from the principal climatological station Trier/Petrisberg. The former observational records are not continued. Below are the two CLINO average values for temperature and precipitation of the period 1931-1960.

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Year
Temperature													
Trier/ Petrisberg:	0.6	1.4	5.5	9.0	13.1	16.1	17.8	17.2	14.4	9.4	5.1	1.6	9.3
Trier/Stadt:	1.2	1.9	5.7	9.5	13.8	16.9	18.6	17.8	14.7	9.7	5.6	2.2	9.8
Precipitation													
Trier/ Petrisberg:	60	51	37	51	62	74	70	80	58	54	60	62	719
Trier/Stadt:	64	53	40	53	61	73	67	78	61	55	59	63	727

Trier/Petrisberg offers consecutive observational records of the air pressure.

BERLIN-DAHLEM GERMANY,FED.REP.OF WMO 10381 52 28N 13 18E 58 M

GERMAN DEMOCRATIC REPUBLIC

GERMAN DEMOCRATIC REPUBLIC (12 stations)

General: Station names, elevations and coordinates given in the table headings are those in use at the end of 1970. Until 12/31/1961, the observations were made at 01, 07, 13, 19 hours Local Mean Time, and in the period from 1/1/1962 to 12/31/1966 they were made at 00, 06, 12, 18 hours GMT. Since 1/1/1967 the observations have been performed at 00, 03, 06, 09, 12, 15, 18, 21 hours GMT with the exception of Wahnsdorf (there further on four times daily).

The mean values have been computed according to the formula:

$$m = 1/4\ (00+06+12+18)$$
$$m = 1/8\ (00+03+06+09+12+15+18+21)$$

The pressure has been reduced to normal gravity.

Precipitation is measured at the 0700 LMT/0600 GMT observation, the daily values are assigned till 12/31/1968 to the day of measurement, since 1/1/1969 to the previous day.

GIBRALTAR

GIBRALTAR (1 station)

Pressure: Station level pressure values are not included. Mean sea level pressures are computed from the formula:

m = 1/4 (00h + 06h + 12h +18h) GMT.

Temperature: Mean monthly values are computed from the formula:

m = 1/2 (Daily maximum + daily minimum), the maxima and minima being read at 0900 GMT; the maximum is credited to the previous day.

Precipitation: The monthly total is the total of the daily readings taken at 0900 GMT and credited to the previous day.

GREECE

GREECE (13 stations)

General: The names, coordinates and the heights of stations are shown with the data.

Daily means of sea level pressure are determined according to the following formula m = 1/3 (08h + 14h +20h) and daily means of temperature are determined from the following formula m = 1/4 (08h + 14h + 2 X 20h) where "h" is Mean East European time.

The amount of precipitation is measured at the observation of 08h for the period from 20h of the day before up to 08h and at the observation of 20h for the period from 08h up to 20h of the same day.

HUNGARY

STATION NOTES

HUNGARY (6 stations)

In the period from 1961-70 the main climatological stations changed the times of observations from 7, 14, and 21 hours to 1, 4, 7, 10, 13, 16, 19, and 22 hours Central European Time. At the same time some of the stations in the central parts of towns, namely the stations Debrecen /12880/, Pécs /12940/ and Szeged /12980/ - among the reported ones - have ceased. That is why the data series for 1961-70 are not given from those stations but from the corresponding stations which continue to be in operation outside the towns.

The data are calculated from the real daily mean values instead of the earlier daily 3 observations. The averages for 1931-60, too, refer to the real mean values. The station Budapest /12840/ with unchanged exposure carries out observations also at 7, 14, and 21 hours, nevertheless, in order to ensure uniformity of presentation of data for all stations, the 1961-70 data set for Budapest with its normal values /CLINO/ is given on the basis of the real daily mean values.

IRELAND

STATION NOTES

IRELAND (14 stations)

General: Station names, elevations and coordinates except where noted have remained the same during the periods concerned. The height of the station is taken as the height above mean sea level of the ground around the raingauge. The height of the barometer is taken as the height above mean sea level of the barometer cistern. Clino values for the 30-year period 1931-1960 are given for pressure, temperature and rainfall for all stations except Casement Airport (atmospheric pressure) and Cork Airport (atmospheric pressure and temperature).

Pressure: Monthly mean values of atmospheric pressure at station barometer level and at mean sea level are derived from the arithmetical average of the monthly mean values for each of the 4 hours, 00, 06, 12, and 18 GMT during the month.

Temperature: Monthly mean values of air temperature are derived by taking ½ (Mean daily maximum + mean daily minimum). Daily values of maximum and minimum air temperature refer to periods of 24 hours terminating at 21h GMT. In all cases the air temperature measurements are obtained using thermometers exposed at a height of approximately 1.2 meters above ground level. The thermometers at each observing station are housed in a louvred shelter (Stevenson Screen) standing on short grass on a flat surface. Temperature values have not been reduced for height.

Precipitation: Monthly amounts of precipitation were determined from daily values which referred to periods of 24 hours terminating at 06h GMT. The term "precipitation" includes all forms of precipitation including deposition phenomena - dew, frost, rime and fog. All amounts are in terms of rainfall, e.g. in the case of snowfall, etc., the values are the corresponding water equivalents. The height above ground level of the rim of the raingauge is 30.5 cm. in each case.

CLONES

Prior to 15h GMT on 14th February, 1966, height of barometer cistern above mean sea level was 89 m.

SHANNON AIRPORT

Prior to 1st November, 1969 height of barometer cistern above mean sea level was 7m.

ISRAEL

ISRAEL (3 stations)

General: Stations names, elevations and coordinates given in the table headings, are those in use at the end of 1970. The name of "Lod Airport" has been changed to "Ben Gurion Airport" as of Jan. 18, 1974. As far as pressure values are given, elevations in the tables refer to barometer height. No correction has been applied to reduce temperature values to uniform elevation.

The temperature and pressure means for Eilat and Lod Airport have been calculated by the following formula:

$$m = 1/24\ (23h + 24h + 01h + 02h + \ldots + 21h + 22h)\ GMT.$$

For Jerusalem Center (Generali Building) the following formula for daily means has been used:

a) temperature : $m = 1/2\ (t_{max} + t_{min})$

b) pressure : $m = 1/3\ (06h + 12h + 18h)$ GMT.

As far as CLINO values are concerned, we propose to use the Clino values published in WMO, No. 117 (TP 52) for Israel (40180) and used in the 1951-60 volume of the World Weather Records.

EILAT ISRAEL WMO 40199 29 33N 34 57E 14 M

ITALY

STATION NOTES

ITALY (29 stations)

Latitude, longitude and elevation of the stations have undergone no changes during the decade 1961-1970.

Monthly mean values of pressure reduced to sea level have been computed by using four observations per day (00, 06, 12, and 18 GMT).

Monthly mean values of surface temperature have been computed by using eight observations per day (00, 03, 06, 09, 12, 15, 18, and 21 GMT).

Monthly mean values of precipitation are obtained by summing the amounts measured daily at 06 and 18 GMT.

CLINO values refer to some of the stations which are indicated in the WMO publication: Climatological normal (CLINO) for CLIMAT and CLIMAT SHIP stations for the period 1931-1960 - WMO/OMM No. 117.TP.52; these values have been updated by the observations of the decade 1961-1970.

JORDAN

JORDAN (5 stations)

General: Station names, elevations and coordinates have remained the same during the period.

Pressure: Monthly mean values of atmospheric pressure are computed according to the following formula:

$$m = 1/3 (06h + 12h + 18h)$$

where h refers to GMT.

Temperature: Monthly means of air temperature are computed according to the formula:

$$m = 1/2 (\text{mean maximum} + \text{mean minimum})$$

Precipitation: The height of the rain gauge above ground is 1 meter. T = less than 0.1 mm.

LUXEMBOURG

LUXEMBOURG (1 station)

General: Observations are taken at 0700, 1300 and 2100 hours local time. Pressure values are reduced to 0°C.

Precipitation is measured at 0700 hours local time. A Hellman type rain gauge with a 200 cm^2 orifice is used.

Temperature values are the means of readings at 0700, 1300 and 2100 hours.

LUXEMBOURG/TOWN LUXEMBOURG WMO 06589 49 37N 06 07E 337 M

MALTA

MALTA (1 station)

Pressure: Station level pressure values are not included. Mean sea level pressures are computed from the formula:

$$m = 1/4\ (00h + 06h + 12h + 18h)\ \text{GMT}.$$

Temperature: Mean monthly values are computed from the formula:

m = 1/2 (Daily maximum + daily minimum), the maxima and minima being read at 0900 GMT; the maximum is credited to the previous day.

Precipitation: The monthly total is the total of the daily readings taken at 0900 GMT and credited to the previous day.

LUQA MALTA WMO 16597 35 51N 14 29E 80 M

NETHERLANDS

NETHERLANDS (1 station)

DE BILT

The means of pressure are the arithmetic means of hourly observations. Prior to January 1, 1965 the values were taken from barograph recordings; the data were corrected by comparison with readings of a mercurial barometer at 0800, 1400 and 1900 hours LMT; since January 1, 1965 the hourly data have been deduced from hourly readings of the mercurial barometer. On January 1, 1965 the height of the barometer cup at 2.95 m was changed to 8.31 m above Amsterdam Ordnance, Datum.

The means of temperature are the arithmetic means of hourly observations obtained from thermograph recordings; the values have been corrected by comparison with readings of a mercurial thermometer at 0800, 1400 and 1900 hours, and with the readings of a maximum and a minimum thermometer. Temperature observations are taken on a grass field in an enlarged Stevenson screen at a height of 2.20 until June 29, 1961; on this date the height was reduced to 1.50 m.

The amount of precipitation has been obtained from measurements by means of an ordinary rain gauge and from recordings of an automatic siphon rain gauge.

The upper rim of both gauges is at a height of 0.40 m above the ground.

DE BILT NETHERLANDS WMO 06260 52 06N 05 11E 8 M

NORWAY

STATION NOTES

NORWAY (12 stations)

General: The data presented are based on observations at 06, 12, and 18 GMT, except for Oslo - Blindern, where the morning observation was made at 07 GMT in January and February 1961. All barometer readings are corrected to 0°C and to gravity at 45° latitude. The monthly mean station pressure is the arithmetic mean of observations at 06 (07), 12 and 18 GMT. Monthly mean sea level pressure is computed according to the formula of Professor Arnt Eliassen: "On the correction and reduction of barometer readings" from Geofysiske Publikasjoner Vol. XIII, No. 11 (Oslo 1944) during the years 1961 - 1968, from January 1969 according to the methods described in WMO Technical Note No. 61 (compare WMO No. 226, TP. 120: Methods in use for the reduction of atmospheric pressure).

Mean monthly air temperature is computed by the formula m = n - k(n - Min) where n is the mean of the observations made at 06 (07), 12 and 18 GMT, k a factor appropriate for the station and season and Min is the mean minimum temperature. Except for Oslo - Blindern for January and February 1961, precipitation is measured at all stations at 06 and 19 GMT.

BERGEN - FREORIKSBERG

H = 43 m (1961-67); 40 m (1968-70)
The correct H, due to a new levelling and a better map is 41 m.

BOOØ V1

67°16'N, 14°22'E. h_t = 2.0, h_r = 1.8.
h_r was previously given as 1.4, which was wrong.

KARASJOK

No changes.

ORLAND

No changes.

OSLO - BLINDERN

No changes, setting aside the change in time previously mentioned for the morning observation.

OSLO - GARDERMOEN

The thermometer screen and the precipitation gauge were moved about 20 m towards the NW on November 24, 1966.

STAVANGER - SOLA

No changes.

TROMSØ - LANGNES

The station was established September 1964. The thermometer screen was moved 34 m towards the ESE, and the precipitation gauge 65 m towards the SE on June 6, 1967.

69°41'N, 18°55'E

(1964-67): h_t = 2.1 h_r = 1.7, H = 10
(1967-70): h_t = 2.0 h_r = 1.9, H = 8

TROMSØ - SKATTØRA

This station was closed on September 12, 1964.

TRONDHEIM - TYHOLT

This station began operating in February 1965, and is situated 1.5 km NW of Trondheim - Voll.

63°25'N, 10°26'E H = 113 m

h_t = 1.9 h_r = 1.7

TRONDHEIM - VOLL

This station was closed on February 28, 1967.

VARDØ

The thermometer screen and the precipitation gauge were moved 30 m, and 20 m southward, respectively, on October 3, 1969.

(1961-69): H = 13, h_t = 1.9, h_r = 2.0
(1969-70): H = 14, h_t = 1.7, h_r = 1.7

BERGEN/FREDRIKSBERG NORWAY WMO 01316 60 24N 05 19E 44 M

POLAND

POLAND (18 stations)

General: Station name, coordinates and height (elevation) reported in tables refer to the end of 1970.

Until the end of 1965 measurements of pressure and temperature were taken at 07h, 13h, 21h of mean local solar time. Mean temperature was computed following the formula:

$$m = 1/4 (07h + 13h + 2 \times 21h).$$

Beginning in 1966, mean temperature and pressure were computed as the arithmetic mean of 8 daily observations (00, 03, 06, 09, 12, 15, 18, 21 GMT).

During the entire period, precipitation for the past day was recorded in the morning hours. Measurements were taken with use of gauge (Hellmann's type) with the collecting surface of 200 sq. cm, set at the height of 1 m above the ground.

	Data	Lat.	Long.	H

PORTUGAL

STATION NOTES

PORTUGAL (20 stations)

General: Observations are taken 3 times daily. Precipitation values are the totals of the daily amounts read at the morning observation. Mean monthly temperatures are 1/2 (mean maximum + mean minimum). Mean monthly pressures are 1/3 (mean monthly pressures for 09, 15, and 21 hours).

Data are given for the following stations:

	Latitude	Longitude	H_p	H

SPAIN

STATION NOTES

SPA1N (18 stations)

Mean temperatures are obtained from 1/2 (maximum + minimum). Precipitation total for the month is the sum of daily totals. The pressure values have all been reduced to 0°C temperature and to sea level thru $P_o = P_z e \left[\frac{gz}{RTm}\right]$ (each observation thus reduced).

The station locations are the same as furnished by the National Meteorological Service and the elevations appear in the tables.

The station Palma/Son Bonet has been closed and substituted by Palma/Centro (WMO 301) also in the Baleares Islands. Valencia should go by the name Valcenia/Viveros.

SWEDEN

SWEDEN (12 stations)

General: Observations are taken at 0700, 1300 and 1900 hours.

The following formula is used to compute the monthly mean temperature: $m = 0.01 (pt_7 + qt_{13} + rt_{19} + st_n)$ where t_7, t_{13} and t_{19} are the monthly means of the 0700, 1300 and 1900 hours temperatures and t_n the monthly mean minimum temperature. s = 0 for January - March and October - December. Values for the constants p, q, r and s are given in the table below.

The station and sea level pressures are the arithmetic mean values of observations taken at 06, 12, and 18 GMT.

The monthly sums of precipitation are the amounts from 06 GMT on the first day of each month to 06 GMT on the first day of the following month.

GOTEBORG, for which data were published in previous volumes, has been replaced by TORSLANDA, which is the airport situated about 12 km west of the center of the city. The aerological observations are made at TORSLANDA.

SWITZERLAND

SWITZERLAND (6 stations)

General: Station names, elevations and coordinates given in the table headings are those in use at the end of 1970.

Temperature means are computed according to the formula:

$$m = 1/4 (0730h + 1330h + 2 \times 2130h)$$

Pressure means are computed as follows:

$$m = 1/3 (0730h + 1330h + 2130h)$$

Precipitation amounts are measured at 0730 hours and are ascribed to the previous day.

BASEL

Station pressure prior to 1951 was given in mm. Hg, reduced to 0°C without correction for gravity. G = 0.08 mm. Station pressures have been converted into mb. for publication in this series.

GENEVA - COINTRIN

Station pressure prior to 1951 was given in mm. Hg, reduced to 0°C without correction for gravity. G = 0.05 mm. Station pressures have been converted into mb. for publication in this series.

	Lat.	Long.	H_p
Geneva prior to 1/1/1961	46°12'N	06°09'E	405
Geneva-Cointrin 1/1/1961 - 12/31/1970	46°14'N	06°06'E	416

Pressure values are 1.3 mb lower at the new site.
Temperatures are also slightly lower at the new place.
0.9°C in December, January, February, March, April and May
1.0°C in June and November
1.2°C in July and October
1.3°C in August and September

Precipitation (mean of the period 1931-1960)

Station	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Year
GENEVA	63	56	55	51	67	89	64	94	99	72	83	59	852
GENEVA - COINTRIN	74	61	60	52	66	87	69	95	104	78	91	65	902

All values for 1961 and following years refer to the new site.

PAYERNE/ST. AEROL

Daily means of pressure and temperature are not available for Payerne prior to 1954 as only one daily observation was made.

SAENTIS

Barometer height at Saentis = 2500.1 meters. Observations are reduced to 0°C but the gravity correction, which here corresponds to a height difference of 4.0 meters, has not been applied. The published values are therefore correct for 2496.1 meters.

SYRIAN ARAB REPUBLIC

SYRIAN ARAB REPUBLIC (6 stations)

General: In computing mean values one of the following formulae has been used in accordance with the program in effect for any particular month:

a) m = 1/24 (00 + 01 + 02 . . . . . 23 hours)

b) m = 1/8 (00 + 03 + 06 + 09 + 12 + 15 + 18 + 21 hours)

c) m = 1/4 (00 + 06 + 12 + 18 hours)

d) Empirical formulae were used for the different elements where only three observations were made daily at 0600, 1200 and 1800 GMT.

e) Since 1959, monthly mean values have also been made for all stations with record exceeding 20 days provided no break in the information of more than five consecutive days was observed.

The formula used for reducing pressure to m.s.l. is that appearing in WMO Publication No. 36.TP.12 "Technical Note No. 7, Reduction of Atmospheric Pressure" page 20 formula 14.

ALEPPOUS SYRIAN ARAB REPUBLIC WMO 40007 36 11N 37 13E 393 M

TURKEY

TURKEY (32 stations)

General: Station names, elevations and coordinates given in the table headings are those in use at the end of 1970. Elevations are the height of the barometer cistern.

Pressure: Station pressure values for the month are computed by the formula:

$$m = 1/3 (07h + 14h + 21h)$$

Temperature: Monthly means are computed by the formula:

$$m = 1/4 (07h + 14h + 2 \times 21h)$$

Precipitation is the total of the daily readings at 0700 hours credited to the preceding 24 hours.

Data published as CLINO values under Turkish stations are not CLINO values as defined by the WMO. Rather they are long-term means taken from the "Mean and Extreme Meteorological Bulletin, 1962" published by Turkey.

CLINO values for sea level pressure are not available.

ADANA TURKEY WMO 17350 36 59N 35 18E 20 M

UNITED KINGDOM

UNITED KINGDOM (17 stations)

General: The selection of stations for inclusion in this publication has been made from those which submit CLIMAT messages.

Station names, elevations and coordinates given in the table headings are those in use at the end of 1970; changes at individual stations are noted below.

Pressure: Station level pressure values are not entered on the climatological returns and it has not been practicable to include them here.

Mean sea level pressures are computed from the formula:

m = 1/4 (03h + 09h +15h +21h)

Exceptions at individual stations are noted below.

Temperature: Mean monthly temperature values are computed from the formula:

m = 1/2 (Daily maximum + daily minimum), the maxima and minima being read at 0900 GMT; the maximum is credited to the previous day.

Precipitation: The monthly total is the total of the daily readings taken at 0900 GMT and credited to the previous day.

BOURNEMOUTH/HURN AIRPORT

No pressure readings January 1961 to December 1962.

EDINBURGH/TURNHOUSE AIRPORT

Pressures computed from the formula:

m = 1/2 (09h + 15h) from January to December 1951.

GORLESTON

Height of raingauge re-assessed in 1966 from 2 m to 4 m. No site change involved.

KEW

Temperature readings to December 31, 1968 and from July 1, 1969 are from thermometers in a screen mounted on the North wall of the Observatory building, with the thermometer bulbs 2.5 m above ground. Temperature readings from January 1, 1969 to June 30, 1969 are from a ventilated psychrometer 1.2 m above ground.

LERWICK

Turf-walled raingauge brought into use December 1966.

TIREE

	Lat.	Long.		H_r		H_z
Jan 1931 - Feb 1935	56°32'N	06°55'W	Raingauge	7	Barometer	12.0
Mar 1935 - Oct 15, 1942	56°32'N	06°55'W	Raingauge	7	Barometer	8.4
Oct 16, 1942 - Sep 1946	56°30'N	06°53'W	Raingauge	13	Barometer	14.0
Oct 1946 - present	56°30'N	06°53'W	Raingauge	9	Barometer	10.4

Mean sea level pressures were computed from the formulae:

m = 1/3 (07h + 13h + 18h) from January 1931 to September 1942
m = 1/4 (01h + 07h + 13h + 18h) from October 1942 to December 1944

VALLEY

For period January 1931 to June 1941 data are from HOLYHEAD.

HOLYHEAD details: 53°19'N 04°37'W h_r = 8, H_z = 8.8. Mean sea-level pressures are computed from:

m = 1/4 (01h + 07h + 13h + 18h) from January 1931 to December 1944

WADDINGTON

For period June 1, 1968 to August 31, 1968 pressures are from SCAMPTON.

SCAMPTON site details: 53°19'N 00°33'W. H_z = 58.

YUGOSLOVIA

YUGOSLAVIA (10 stations)

General: Station names, elevations and coordinates given in the table headings are those in use at the end of 1970. Observations of atmospheric pressure and temperature were made at 0700, 1400 and 2100 hours local time. The temperature means were computed according to the formula:

$$m = 1/4 (07h + 14h + 2 \times 21h)$$

The pressure means were computed according to the formula:

$$m = 1/3 (07h + 14h + 21h)$$

The values of precipitation recorded at 0700 hours are those from 0700 hours on the previous day to 0700 hours on the morning of observation.

The value of elevations of the station Beograd, in the World Weather Records 1951-1960 edition, should be 132 instead of 139 m.

SUNSPOT NUMBERS

ZURICH SUNSPOT RELATIVE NUMBERS

Authority: Waldmeier, M., The Sunspot-Activity in the Years 1610-1960. Swiss Federal Observatory, Zurich, 1961.

General: The Zurich scale for sunspot-relative-numbers is based on the system originated by Wolfe. The factor established by Wolfe has been kept constant by the Swiss Federal Observatory. Complete details of the program and the methods of observation and computation are given in the above cited source.
